Description	Similar to a regular split lock washer, but with a greater outside diameter and thickness.
Applications/ Advantages	The increased bearing area makes this suitable for applications involving higher tightening torques.
Material	SAE 1055 - 1065 carbon steel.
Hardness	Rockwell C38 - 46
Twist Test	With the washer in a vice with the split ends free and straight above the vice jaws, a 90° segment of the free end is gripped with a wrench and bent. Washers are to withstand being twisted through a 90° angle without signs of fracture. When the washer ultimately fractures beyond the prescribed 90° limit, the structure at the breaking point shall show a fine grain.
Plating	See Appendix-A for information about plating heavy split lock washers.
